Second Embodiment

A second embodiment of the image search device according to the invention is incorporated into a surveillance camera 60. Referring to Fig. 6, the surveillance camera 60 has a main body 62 that corresponds to the image separating device 20 in the first embodiment, a lens barrel 61 mounted in front of the main body 62 and first and second CCD cameras 40, 30 functioning as image pickup devices mounted to the rear of the main body 62. As clearly shown in Figs. 1 and 6, the arrangement of the surveillance camera 60 of the third embodiment is substantially similar to that of the endoscopic apparatus 1 of the first embodiment. Therefore, the components similar to those of the endoscopic apparatus 1 of the first embodiment are respectively denoted by the same reference number and their explanations are omitted.
